

1. Die-cut two top/bottom pieces from cardstock.

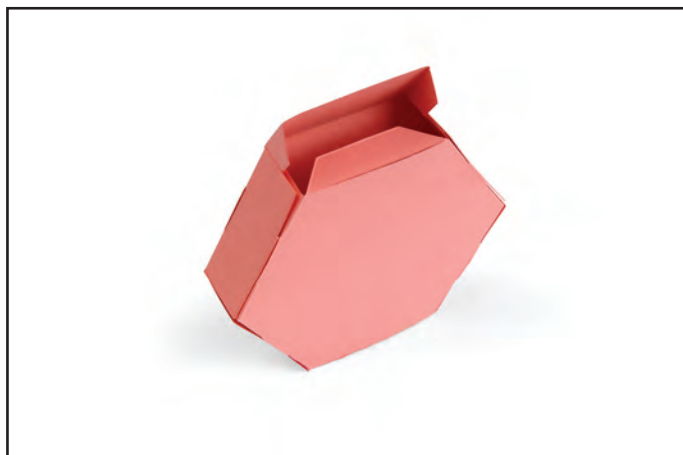

2. Lay both pieces face down. Adhere the small tab of the top piece (on left) to the square panel with no semicircular tab on the bottom piece (on right). Once connected, fold all creases in the same direction.

3. Fold the bottom piece (right) over, making sure the side panels are inside of the side panels on the top piece. The above illustration shows the project upside down, with the bottom on top.

4. With the box still upside down, insert all of the semicircular tabs into the corresponding slits.

5. Flip over and close final panel.
