

# 661881 Sizzix® Thinlits™ Die Set - Large 3-D Flower by David Tutera™

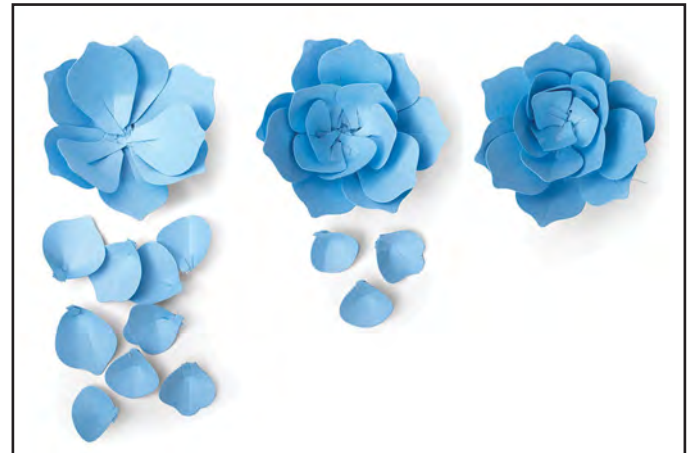

1. Die-cut from desired material.

2. On each petal, adhere the outer tabs to each other. The tighter the tabs are crossed, the more the petal will be cupped. Adhere the crossed tabs to the center strip.

3. Repeat step 2 for all of the individual petals.

4. Stack and alternate the three-petal sections of the flower to create a base. Adhere the individual petals to the inside of the blossom, starting with the largest petals and finishing with the smallest.

5. Fold the fingers of the stamen in one direction. Roll the stamen, starting at the large end.

6. Adhere the stamen to the center of the blossom, and attach the leaves to the back of the blossom.
